Scatter Plot-Max. Post-baseline vs Max. Baseline for Lab Test 1 (mmol/L)

		Treatment Emergent High		
Planned Treatment (N)	*Nx*	*n*	*%*	*FishersP*
0	84	5	6.0	1.0000
54	84	5	6.0	
81	82	5	6.1	

Scatter Plot: Includes subjects with both a baseline and a post-baseline measure. Reference limits apply to most of the participants are used in the plot
N=number of subjects with at least one post-baseline measure; Nx=number of subjects with maximum baseline either normal or low and have at least one post-baseline measure.
Summary tables used the reference limits set 1 (Male, Age 18-65, LLNx 60 mmol/L ULNx 90 mmol/L) set 2 (Female, Age 18-65, LLN=60 mmol/L ULN=90 mmol/L).
